

## Creating the setup ✕

Setup with automatic update (live update)

**1** Executable

- Definition of EXE
- Content of EXE
- Version information
- Framework
- Security

**2** Setup

**Setup mode (2/6)**

- Setup files
- Data
- Additional Information
- Installer skin template
- Languages and messages
- Medium

**Local network (LAN) setup, "push" enabled**

The reference setup is found on a shared directory of the local network. The deployment is performed from this directory or in "Push".

**Setup by HTTP (on owner server or in the CLOUD)**

The reference setup is found on an HTTP or HTTPS server. You have the ability to use an owner server or a CLOUD setup server.

**Multisite setup**

A master setup is found in a HTTP(S) or CLOUD server. Is it used to deploy and update a reference setup on the local network; then, this reference setup will be used to install and update the client computers.

LumiChequeWriter - Setup wizard
Version: 1.0.27.0

## Welcome to the network setup wizard of LumiChequeWriter

The application to install will be automatically updated via a Web server.

**Deploy the setup on this computer**

The Web server will be installed (if necessary) and automatically configured by the installer.

**Deploy the setup at a hosting company**

An FTP connection is used to send the application elements to the server.

**Deploy the setup in the CLOUD**

You are using a WINDEV Setup Server available in your CLOUD for PC SOFT applications.
